OptiProERP
MANUFACTURING
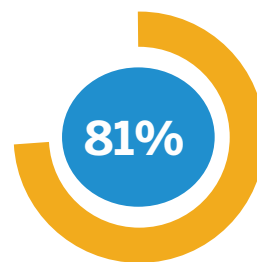

Warehouse Management System

for small and midsized manufacturers

If you're a small or midsized manufacturing business, a big chunk of your working capital is tied up in inventory. OptiProERP's Warehouse Management System brings real-time visibility into the status of your warehoused inventory, capturing data from receiving to location transfers, all the way to confirmation of shipment received.

- Automate multiple inventory transactions with OptiProERP's intuitive mobile solutions.

- Track and control quarantined inventory for quality assurance.

- Check the status of inventory on the move with the anywhere, anytime convenience of OptiProERP's mobile solutions.

Warehouse Management from OptiProERP expedites pick and pack, tracks the shipment of orders and confirms delivery. The Warehouse Management System also monitors the raw material used to fulfill production orders and records receipt of both work in process and finished product as they enter the warehouse.
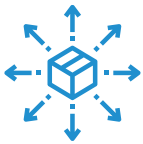

81% **of manufacturing CEOs see mobile technologies as being strategically important for their enterprises.**

Warehouse Management System for small and midsize manufacturers

OptiProERP's Warehouse Management System is a manufacturing ERP function that coordinates and records the movement of inventory (materials, parts, work in process or finished goods) into and out of one or more warehouses, even location changes within a single warehouse.

OptiProERP's Warehouse Management System Functionality

Material Issuance and Receiving

Inventory Counting and Adjustments

Mobile Solutions

" OptiProERP being an SAP-based product was a good thing for me as I have had experience with SAP platforms. They (OptiProERP) were very clear about what was possible and were really good at explaining the analogy to their background in discrete manufacturing. They came at it from the understanding that it didn't matter what you were producing, there are proven ways to track production and implement. That really is what got us turned on to OptiProERP. "

Travis Poe, Facility Director/Founder, HendRX

OptiProERP's Warehouse Management System Highlights

Material Issuance and Receiving

Issue materials for customer delivery or production. record receipt of goods from vendors or finished goods from the shop floor using the mobile app and bar code scanners.

Inventory Counting and Adjustment

Use the mobile app to capture cycle counting or physical counting of inventory for real-time status of actual stock.

Intuitive and Easy to Use Mobile App

Mobile app facilitates execution of inventory transactions as they move to and from the warehouse in real time. Works from any handheld device or on a browser from a desktop or laptop machine.

About OptiProERP

OptiProERP was founded with the vision to solve the 21st century problems that manufacturers face.

Our solution was OptiProERP, a unique manufacturing-specific solution, built on SAP Business One, the #1 ERP platform for small and midsized businesses. With SAP's continuous 21st century platform innovation, we could focus on innovating and developing our industry-specific manufacturing functionality. Instead of adding a layer of code on top of SAP Business One, OptiProERP is built into the DNA of SAP's trusted ERP platform.

The result is a 21st century solution designed to help growing manufacturers gain full visibility and control of their business, reduce production costs, increase profit margins and leverage data to inform intelligent business decisions.
